

Caya[®] *contoured diaphragm*

The new female contraceptive barrier device

Caya[®] is a single-size contraceptive barrier device designed to fit a broad range of women.

- The Caya[®] contoured diaphragm is easy-to-use, and offers discreet contraceptive protection.
- Caya[®] was developed as the SILCS diaphragm, in a user centered design process incorporating input from women, their partners, and providers. This feedback led to an innovative design that is easy and comfortable to use.
- Caya[®] is made for women who are interested in a non-hormonal, user-initiated method with no side effects.
- **Cervical cup:** Accommodates a range of cervical sizes.
- **Rim:** Provides stability and helps guide the Caya[®] deep into the vagina as the woman pushes on the anterior edge.
- **Grip dimples:** Orient the woman's fingers and provide a tactile cue for where to hold and squeeze the rim.
- **Removal dome:** Allows for easy removal; a woman's finger can fit under or over the dome to remove the device.
